Art Unit: 3743

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

Claim 5 is rejected under 35 U.S.C. 103(a) as being unpatentable over Phillips et al as applied to claim 1 above, and further in view of Roberts. Phillips discloses a heat pipe cooling system for cooling computer chips which is powered by an electrical heater. Phillips however does not specifically disclose using a wicking element in the evaporator. Roberts Jr. teaches a heat pipe heating system which is powered by an electrical heater and using a wicking material within the evaporator of the heat pipe (col. 4 line 32). It would have been obvious to one of ordinary skill in the art to have modified the heat pipe cooling system of Phillips et al to have provided a wick within the

Application/Control Number: 09/897,793

Art Unit: 3743

evaporator for the purpose of improving the heat absorption of the evaporator as taught

by Roberts Jr.

Claims 7,8, 21,22,23 and 28 are rejected under 35 U.S.C. 103(a) as being

unpatentable over Phillips et al. Phillips et al discloses applicant invention as claimed

with the exception of a specific recitation of the amount of liquid within the heat pipe.

The amount of liquid charged with a heat pipe system is completely dependent on the

heat load of the heat source that the heat pipe will be used to cool. It would be obvious

to fill the heat pipe up to 90 with liquid refrigerant or any other amount depending on the

load to be cooled.

Also to put the elements of the heat pipe cooling system in the form of a kit would

Patent Examiner

have been an obvious arrangement since lacking any other crtical aspects of the putting

the separately claimed elements in a kit has been long settles to be an obvious

configuration
